

Problem Statement

1. Title

CampusConnect – Internship & Campus Hiring Platform

2. Domain

Campus Recruitment & Internship Management System

3. Who is the User?

Student: Register, login, manage profile, upload resume, search internships, apply, and track applications.

Company/Recruiter: Register, post jobs, manage applicants, shortlist candidates, and schedule interviews.

Admin: Manage users, verify companies, monitor job postings, and maintain the platform.

4. What Problem are We Solving?

Students currently search for internships across multiple platforms and manually track their applications. Recruiters receive applications through emails, forms, and different portals, making it difficult to organize candidates efficiently. A centralized platform is needed to simplify internship recruitment, improve communication, and provide transparent application tracking.

5. Proposed Solution

CampusConnect provides a centralized platform where students can create profiles, upload resumes, search and apply for internships, and track application status. Companies can post opportunities, manage applicants, and schedule interviews, while administrators monitor and manage the platform.

6. Core Entities / Database Tables

Student
Company
Admin
Job
Application
Resume
Interview
Notification

7. User Roles & Permissions

Student: Manage profile, upload resume, search/apply for jobs, track status.

Company: Post jobs, manage applicants, shortlist/reject candidates.

Admin: Manage users, verify companies, monitor job postings.

8. Success Criteria

- Student can register and apply for an internship within 2 minutes.
- Recruiter can post a job within 2 minutes.
- Students can track application status from one dashboard.

9. Out of Scope

AI resume analysis, AI interview chatbot, coding assessment platform, payment gateway, HRMS integration, mobile application.

10. Chosen Track

Backend: Java (Spring Boot)

Frontend: React.js

Database: PostgreSQL

Authentication: JWT

Deployment: Docker + Cloud
